

UI / UX Analyst / Designer

Everywhere Australia

Design & Architecture > Web & Interaction Design

- Hybrid working environment (or remote depending on your location)
- 12-month contract with likely extension | Competitive day rate

Define the user experience vision and advocate for the customer through human centred design. Work within a close-knit project delivery team to design, configure and deliver a iOS application.

UI / UX Analyst / Designer

Everywhere Australia

Everywhere Australia is an innovative group who in 2023 will deliver an evolutionarily application to the Australian market through one of our newly developed products. We are currently seeking a UI / UX Analyst / Developer to join our highly experienced project delivery team to assist with the design of the User Interface. This role is an initial 12-month contract position with high likelihood of extension to continue to develop this product after launch.

In this role you will:

- You'll have broad end-to-end design remit to create and manage the overall user interaction and experience of the platform build, refine and maintain design system components;
- Ensure optimal experiences by performing tasks such as user interviews, information architecture definition, ideation, identifying pain points, wireframing, creating prototypes, personas user journeys, interaction and visual design;
- Work with the business to identify potential solutions, conduct feasibility studies and business cases to justify an investment in change;
- Ensure user stories are communicated to both software development and testing teams;
- Work with technical staff and act as a conduit between business customers and technical staff to define /refine requirements and develop solutions;
- Working directly with staff to trace business requirements through to test plans and cases, reducing time to fix issues and identify anomalies;
- Facilitate workshops to clarify and negotiate business outcomes; and
- Respond to changes in customer needs and expectations.

What you will bring:

- Excellent examples of refining and defining user interfaces, streamlining them influencing development teams;
- Experience in an IT environment with strong skills in the development of requirements and specifications according to standards;
- Analytical thinking and problem solving;
- Sound written communication skills, including the ability to simplify complex system and process concepts and creativity in communication;
- Ability to cultivate productive working relationships and communicate with influence;
- Ability to work both individually with minimum supervision and also within a team environment;
- Knowledge of software development life cycle;
- Knowledge of risk management frameworks and experience in applying to an ICT environment; and
- Experience in an ICT operational environment.

If you are passionate about app development and this role sounds exciting to you, we would love to hear from you! Please **apply now** and we will review and be in touch with regard to your application.
