Technical Architect
Everywhere Australia
Architects (ICT)

- Hybrid working environment (or remote depending on your location)
- 12-month contract with likely extension | Competitive day rate

Exciting opportunity for a Technical Architect to work within a close-knit project delivery team to design, develop and deliver an iOS application.

Technical Architect
Everywhere Australia

Everywhere Australia is an innovative group who in 2023 will deliver an evolutionarily application to the Australian market through one of our newly developed products. We are currently seeking a Technical Architect to join our highly experienced project delivery team to lead the development of the application. This role is an initial 12-month contract position with high likelihood of extension to continue to develop this product after launch.

In this role you will:
- Analyse application processes, requirements & initiative and turn them into actionable technical design items for dev team;
- Assist with architecture of software structure and infrastructure;
- Preform Proof of Concept projects pairing with the senior developer to validate architecture;
- Regular technical sessions with the senior developer to address any area of improvement;
- Carefully watch progress of projects to identify risks / process gaps / quality issues;
- Perform code reviews;
- Defining blueprint, addressing all high-level business and technical requirements; and
- Take ownership of a particular solution offering.

What you will bring:
- Eight – ten years in crafting your skills as a Senior Developer / Tech Lead;
- Hands-on approach and ideally have leadership experience;
- You have expert level mastery in at least a few areas you have worked on, e.g., Language, Framework, OOAD, Microservice, Architecture, messaging etc;
- You are a high-preforming individual and have excelled in all teams you have led / worked in;
- You have experience with Swfit and are still hands-on;
- You have gained the maturity to look at problems beyond technology & frameworks into business need and full SDLC. Know the difference between important stuff vs technical noise; and
- Craftmanship is in your core, you have passion for gaining mastery and dig all the way through any technology / framework you worked on.

If you are passionate about app development and this role sounds exciting to you, we would love to hear from you! Please **apply now** and we will review and be in touch with regard to your application.
